## DETAILED ACTION

1. Claims 1-22 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The present invention provides a system that at least doubles the spatial resolution for non-continuous tone data while maintaining adequate spatial resolution for continuous tone data and minimizing the amount of memory and corresponding transmission bandwidth requirements (specification, page 3, lines 11-15). In particular, the new system comprises the following features, which the prior art, either taken singly or in combination, does not teach:

- an encoder that discards image data corresponding to half of the pixels of the image data and compresses the remaining image data so that data corresponding to two non-continuous tone pixels are compressed into a single compressed-data-bitword; and a data decompressor that decompresses a data in a single compressed-data-bitword to render a two pixels of non-continuous tone data and synthesizes data to render a third pixel of non-continuous tone data (see independent claim 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
